Seminar provided.

Specific functions (type of teaching and scientific activity that the successful candidate will be required to carry out)	Teaching activity: The teaching functions required are those relevant to the Degree Programmes for which the Department is responsible within the University, and/or other Degree Programmes to which the Department relates and/or contributes. Scientific activity: The scientific functions required are within the scope of the Competitive Area with a focus on the synthesis by mechano-chemical methods of organic and metallorganic molecular materials and their characterisation by crystallographic methods
Language skills in addition to Italian, if any	English
Number of publications to be assessed	15
	Seminar at the Department
Format of the seminar at the Department	The seminar will be held out in Italian or English depending on the candidate's preference The seminar will be held in person.
Assessment standards	
	Teaching activities
Lecturing	For the purposes of assessing prior teaching experience, consideration will be given to its volume and continuity, with particular reference to teaching activities carried out in the last 10 years.
Supplementary teaching and student support activities	For the purposes of assessing supplementary teaching and student support activities, consideration will be given to activities such as supervision of first-cycle and second-cycle degree dissertations and PhD theses, the conduct of seminars, practical work and tutoring of students.
	Research and scientific publications
Research	For the purposes of assessing research activities, qualitative standards will focus on the following aspects: a) organisation, management and coordination of national and international research centres or groups, or participation therein, and other research activities such as direction of, or participation in, editorial boards of journals; b) receipt of national and international awards and recognitions for research;

	c) participation as a speaker at congresses and conferences of international interest.
Overall scientific production	Consideration will be given to the overall weight of the candidate's scientific production and its intensity and continuity over time, excluding any adequately documented periods when work was suspended and other mandatory or long-term leaves established by current laws, other than those allowed for study purposes.
Scientific publications submitted for assessment	<p>The scientific publications submitted for detailed assessment will be assessed with reference to the following criteria:</p> <ul style="list-style-type: none"> a) originality, innovative nature, methodological rigour and importance of each publication; b) consistency of each publication; c) scientific importance of the journal in which each publication appears and its readership within the scientific community; d) analytical assessment, also by applying criteria recognised by the relevant international scientific community, of the individual contribution of the candidate to collaborative works, which will be determined based on the scientific consistency of the publications with his or her submitted curriculum vitae and whether he or she is author of reference or first author. <p>The Committee will also make use of one or more of the following bibliometric indicators, referring to the start date of the assessment: 1) total number of citations; 2) average number of citations per publication; 3) total impact factor; 4) average impact factor per publication; 5) combination of the preceding parameters in order to assess the impact of the candidate's scientific productivity (Hirsch or similar index).</p>
	Service, institutional, organisational and third mission activities
Service, institutional, organisational and third mission activities	For the purposes of assessing service, institutional, organisational and third mission activities at Universities and private and public research institutions, to the extent relevant to the role, consideration will be given to their volume, duration and continuity, as well as to the level of responsibility of the functions performed.

<p>Specific functions (type of teaching and scientific activity that the successful candidate will be required to carry out)</p>	<p>Teaching activity: The successful candidate shall be able to teach the law of cultural and artistic heritage of religious interest as well as intercultural law with particular reference to the theory, history and regulation of the religious and identity factors: also in relation to the development of audiovisual media and digital platforms. They shall then run course units on the relationship between sport and identity with regard to master's degrees and course units dealing with this subject, and which, within the subject of 'identity, religion and communication' fall, for example, within the framework of the Second Cycle degree programme on 'Information, Cultures and Media Organisation'. The successful candidate will also teach course units on the relationship of traditional and more widespread religions as well as new religious movements with the Internet and audiovisual media from a legal-historical perspective. All this aims to train students - also in connection with the Second cycle degree programme in Journalism - in the communication of cultural and religious diversity and cultural-identity conflict.</p> <p>Scientific activity: In coherence with the main scientific lines of the Department of the Arts, the successful candidate shall conduct research in the areas of art, religion and law; law and history of the cultural and artistic heritage of ecclesiastical property and of religious interest; interculturality, religious factors, identity and the media; churches, confessions and new religious movements and the internet; sport and religion between regulation and communication; cinema, law and religion; sacred music, liturgy and the law of religious confessions.</p>

<p>Specific functions (type of teaching and scientific activity that the successful candidate will be required to carry out)</p>	<p>Teaching activity: The planned teaching activities focus on the fundamentals of road design and construction with particular reference to the modification of the territory and the impact on external factors produced by road transport infrastructures, starting with the identification and quantification of the impacts these have on the environment and humans. The sustainability of road infrastructure paving is also the prevailing theme of the course units to be taught and the related supplementary teaching activities (supervisor of dissertations and internships). Scientific activity: The scientific research activity focuses mainly on materials for the construction and operation of road paving, with particular reference to sustainable solutions for recycling waste materials, increasing the durability of works, reducing pollutant and noise emissions, replacing binder materials from fossil resources and minimising the risks associated with fall impacts.</p>
